

## Telsonic Introduces New MES Connector for TelsoFlex: Revolutionizing Your Manufacturing Control

Bronschhofen, December 4, 2023

Telsonic, a leading provider of ultrasonic welding systems, is pleased to announce the launch of the innovative «MES Connector» for Telso®Flex. The «MES Connector» simplifies the integration of Telsonic systems into client-side manufacturing systems (MES). Customers can customize the interface to their MES, allowing them to design their systems individually without being dependent on Telsonic. The «MES Connector» offers pre-built functions to respond to events, capture orders, send messages, create logs, and query data.

### Advantages of the MES Connector

- **Easy and Fast Integration:** Telsonic manual workstations and integration solutions can be effortlessly connected to operator-specific MES.
- **Control and Integration:** The MES Connector transfers control of the MES interface to the operator's hands. At the same time, Telsonic ensures future-proof integration into the Telso®Flex software.
- **Time and Cost Savings:** Standardized and pre-built functions of the MES Connector reduce errors and save development time and costs.

### Features of the MES Connector

The MES Connector is a JAVA open-source software that runs parallel to the Telso®Flex software on the machine's PC.

- **Flexible:** Various interfaces can be implemented, such as OPC-UA, Socket, or database interfaces.
- **Time-Saving:** Integrated event management and simple configuration of log data creation.
- **User-Friendly:** Supports barcode scanning and enables sending messages from the MES to the machine's screen.

The MES Connector is now available for the Telso®Terminal TT7, as well as the MPX and TSP product families.

### About Telsonic

Telsonic has been a pioneer in the development and manufacturing of ultrasonic welding systems for decades. With a focus on innovation and quality, Telsonic offers solutions that enhance efficiency and performance in the manufacturing industry worldwide.
