

**TELSONIC at the International Powder & Bulk  
Solids exhibition:  
May 3 – 5, 2016**

This year TELSONIC travelled to Rosemont Illinois to take part in the International Powder and Bulk Solids Exhibition. Powder and Bulk is North America's largest and longest-running powder show, celebrating its 40th year in 2016. The event is for the dry processing industry, giving access to a full range of equipment, technology, information, and expertise needed for every phase of the process. 350 exhibitors from all over the world showcased their latest innovations.

This year at Powder and Bulk TELSONIC presented two new products:

- SONOSCREEN®cyclone, the new ultrasonics application for more efficient screening performance in eddy current screening machines. This space-saving ultrasonics solution is also ideal for retrofitting.
- The brand new ultrasonics components for powder recovery systems combine sustainable use of resources during processing with minimum powder loss and reduced costs.

The live demonstrations of these innovations caught the attention and interest of many visitors to the stand.
