

Telsonic successfully took part at The Assembly Show

November 2016

The 4th annual Assembly Show was held October 25-27 in Rosemont, Illinois. There were 276 exhibitors occupying 67,000 net square feet at the Donald E. Stephens Convention Center. The attendance was expected to be over 70,000.

This show was a great success for Telsonic this year. One of the highlights was the new machine builder display. Telsonic demonstrated the multiple ways that you are able to communicate with the new Telsonic [MAG](#) generator as well as to simulate PLC discreet I/O with a switch box. The [TCS5](#) controller was also presented with the optional I/O block for auxiliary devices. The Telsonic highlighter was welded live to pass out examples to visitors at the show.
